

# Biohazard & Fentanyl Safety Training

## Presented by Trauma Services

### TRAINING INFO

The Biohazard & Fentanyl Safety Training Workshop will provide first responders, health officials, disaster responders, animal control officers etc. with a working knowledge of the necessary tools to safely and correctly navigate through scenes contaminated with fentanyl & biohazards.

Attendees will examine the various types of bio-hazardous environments first responders, health officials, disaster responders, animal control officers etc. might face: the proper methods to assess risk to these responders; how to navigate safely within a bio-hazardous scene and what tools are necessary to remain protected against anything that may pose a bio-hazardous threat. All blood borne pathogens and biological/biohazardous threats will be touched upon (i.e. HIV, Hepatitis, Tuberculosis, MRSA, feces, bed bugs, chemical suicides, needle sticks, fentanyl etc.) After the seminar, the participant will understand the necessary procedures in safely dealing with a scene that poses a bio-hazardous threat.

This seminar will be facilitated by Trauma Services, a crime scene, biohazard and fentanyl cleaning company that is committed to helping families, property owners and businesses during tragic situations.
